PROFESSIONAL SUMMARY

Software Developer and Master of Computer Applications (MCA) candidate, Dreamvestor 2.0 Grand Finale finalist, holding Microsoft, Google, and IIT Madras certifications. Skilled in C#, ASP.NET Core, React, Python, Django, and PostgreSQL, with hands-on experience designing high-throughput API gateways, secure microservices, and full-stack web platforms. Builds production-ready software grounded in Clean Architecture principles, from enterprise financial platforms to real-time automated data processing systems.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, Dart

Backend: ASP.NET Core, YARP (Reverse Proxy), REST API Development, Django, Express.js (Node.js)

Frontend: React.js, Flutter, HTML/CSS

Databases: PostgreSQL, MongoDB, SQL Server / SQLite

Cloud & DevOps: AWS, Docker, Git/GitHub

Practices: Clean Architecture, Dependency Injection, Microservices Architecture, Distributed Tracing, Rate Limiting, RESTful API Design, Problem Solving

EXPERIENCE & PROJECTS

AegisTrader – Enterprise Financial Simulation Platform *React.js, ASP.NET Core, PostgreSQL*

- Engineered an enterprise-grade financial simulation platform using ASP.NET Core for backend operations and React.js for an interactive UI.
- Designed a scalable PostgreSQL database schema to store and query complex transaction and analytics data efficiently.
- Implemented Clean Architecture principles to ensure strict layer decoupling, maintainability, and domain rule encapsulation.

Custom Lightweight API Gateway – Reverse Proxy & Traffic Controller *C#, .NET 10, YARP, ASP.NET Core*

- Architected an API Gateway using .NET 10 and YARP to centralize dynamic routing, load balancing, and traffic control across downstream microservice clusters.
- Engineered centralized edge JWT validation and fixed-window rate limiting (System.Threading.RateLimiting) to mitigate unauthorized requests and DDoS traffic.
- Implemented distributed request tracing via dynamic X-Correlation-ID header injection and standardized JSON error handling for pipeline resilience.

m1-ob-scalper – Automated Market Data System *Python, MetaTrader 5*

- Developed an automated, high-frequency data parsing system in Python interfacing directly with MetaTrader 5 real-time data feeds.
- Built logic-driven algorithms to process market data with low latency, automating decision workflows.

Django Web Development Trainee – Faith InfoTech, Technopark, Thiruvananthapuram *1-week industrial training*

- Developed a clinic management system in Django within an intensive one-week programme, delivering a working application from requirements to completion.
- Applied Django's MVT architecture, ORM models, and database integration to manage clinic data and administrative workflows.

EDUCATION

Master of Computer Applications (MCA) – MACFAST, Tiruvalla (Mahatma Gandhi University) 2025 – 2027

Bachelor of Computer Applications (BCA) – SAS, Konni (Mahatma Gandhi University) 2022 – 2025

CERTIFICATIONS & ACHIEVEMENTS

- Foundational C# Certification – Microsoft & freeCodeCamp
- Dreamvestor 2.0 Grand Finale Finalist – ASAP Kerala and KSIDC
- Full Stack Web Development – MERN Stack (A+ Grade) – Capital Infotech
- Security Principles in Cloud Computing – Google, Coursera
- Python for Data Science – IIT Madras, NPTEL
- Generative AI: Prompt Engineering – IBM, Coursera

LANGUAGES

Malayalam, English, Hindi
